

Tellus Web

A powerful tool in your organisation

TellusWeb is a modern web-based platform that have a intuitive user interface that supports multiple languages and all time zones.

It is a scalable platform that is based on what kind of licenses you need in your organisation, this makes it very flexible and easy to fit your specific requirements.

TellusWeb works as your hub for all Tellus applications, and have a lot of great features that encourages you to get more organised in your professional life.

By integrating it in your organisation you have taken a step in the right direction for a more unified organisation that seeks to establish a good cooperation with each other.

SourceTech TellusWeb supports all leading browsers (Tellus version 2.9 and up only supports Internet Explorer 9 or later). This means that no software needs to be installed, the only things needed is a computer with a network - Easy and powerful!

You can read more about the various functions included on the following page.

Key functions in TellusWeb

Status

To set an absence on your phone when you are not able to receive any phone calls is not only important for your organisations switchboard operators, it is especially important for the customers that are seeking you to get a correct answer. Do not let them call you in vain.

Search

It is easy to find your colleagues phone numbers, titles, addresses and absences with the search function. You can search by writing names or specific keywords in the search bar.

Contacts

Store your companies external contacts in one place! The contacts will be searchable for both users and operators. This means that you no longer will have to call internal to find the number you are looking for.

Schedule

Every user can choose to create a personal schedule. Add your working hours and repetitive absences like your lunch break to the schedule for automatic absence handling every day.

Profiles

It's easy to decide where you want to take your calls with the unique profile handling in Tellus. If you work from home you might want to forward your calls to your home telephone or mobile phone, but you still have all your absences and lunch break intact.

Groups

You can create searchable groups for different departments or projects. Doing this makes it easier to send messages to all people in one group at the same time. You can even put an absence on all in the group.

Messages

You can send and receive messages in TellusWeb, it works much like an ordinary e-mail application but only for internal messaging between co workers.

Settings

Every user have access to change their settings in Tellus. The possibility to change certain settings are based on what role they have in the system, this means that the office administrators can design specific roles for each type of user that should have access to different settings.

Micro blog

Each user have access to a micro blog in TellusWeb and MyTellus. You can easily let your colleagues know what you are doing for the moment. It is a type of status updates that stays within the company walls. These updates is visible in TellusWeb and in the operator application.
